The final two weeks of the quarter will be reserved for discussion of topics of interest to the students, such as quantification or historical change. The discussion proceeds on the assumption that phonological differences between grammars, no less than syntactic differences, are constrained

by universal principles and occur within fixed bounds defined by a relatively small number of parameters. The book explores recent innovations in nonlinear theory, focusing on the internal composition of segments and the manner in which these are organized into prosodic constituents.

It is a central tool for any sociocultural understanding; necessary to the pro-
